keywords

- Communities
- Discussion forums
- Information systems
- Blogs
- Correlation
- Educational institutions

Literature Survey

LET'S DISCUSS is an online discussion forum where people can hold conversations in the form of posted messages. A forum has a tree like directory structure, which can accommodate numerous discussions and sub discussions.

Proposed Work

Owned by no one and by everyone.

Promoting the conversation among people with different point of view that will solve the problems of users and also be responsible for great change in future.

Technology Used

- ❖ Php
- ❖ MySQL

FEATURES OF LET'S DISCUSS:

There will be main three panels made:

- User who is currently not logged in cannot access this site.
- User who is currently login have the control to its own account and can ask the question as well as the user can reply to any query asked by another user.
- Admin panel has the high access to all the users data and have control to all the comments mentioned by the users.

The project contains five main modules

- 1. Category**

2. Registration

3. Ask questions

4. Post and take answer

5. Send message

Advantages of LET'S DISCUSS

A system is required which is being capable of elimination of all the problems and become useful to users and thus the new system is derived. Here we get a different view from different users.

- Interaction will be easier.
- Users article can be viewed by others.
- Less time consuming.

THANK
YOU.
